--- [Summary] ---

I've been doing L2 support for Ceph storage at croit since 2022, which means communicating with customers through production incidents, debugging what went wrong and getting engineering what they need to fix the root cause. I am good at that cycle and I am good at turning it into a repeatable process. In my own time I build valuable software with LLMs and run it on servers I manage myself.

--- [Apps] ---

ttyinv · app.ttyinv.com live

Invoicing for people who love markdown and monospace. Write the invoice in Markdown and get a print-ready PDF. One Rust engine for every adapter: the CLI, the browser editor and an API, so the user, their browser and their AI agent all get the same result.

calternal · calternal.com live

Life-logging app at its core with calendar, journal, notes, tasks, files, mail and budgets. A personal cloud in plain text the user owns. File-over-app abstracted to be user friendly. Each account gets its own sandbox with frontier harnesses, so the AI has immediate context and incredible control.

infraternal designing

An infrastructure control plane that manages SSH, containers and more.

--- [Experience] ---

croit GmbH / croit North America Inc. · Ceph Support Engineer Feb 2022 - now

- Lead support for Ceph RGW/S3; L2 support for croit/Ceph and Proxmox, often the first contact for incidents in a customer-facing role.
- Onboarding for colleagues and customers for croit/Ceph and Proxmox, reproducing issues in a lab to fix and/or delegate. Documentation around the process.
- Turn recurring cases into public material: blog posts, YouTube videos and conference talks.

Debian · Google Summer of Code: systemd-to-OpenRC unit translator in shell 2020

IDS Logic · Junior DevOps intern: monitoring, automated deployment and updates 2018, 2019

--- [Also] ---

- Self-host 35+ services with rootless Podman, plus Proxmox and ZFS hosts on a 40-peer NetBird mesh, managed with Nix.
- Run my own email for kayg.org on MXRoute and then Fastmail, with SPF, DKIM and DMARC set up.
- Talks on Proxmox 9, ZFS encryption, Ceph RGW multi-site and Proxmox VLANs at FOSS United and other meetups (kayg.org/talks).

--- [Toolkit] ---

Support L2 escalation, incident communication, root-cause write-ups, docs and video
Building Rust, TypeScript, Next.js, SvelteKit, Astro, shell, Claude Code, Codex, MCP
Infra Linux, Ceph, Proxmox (certified), Podman, Docker, Nix, Terraform, Traefik, Cloudflare

--- [Education] ---

IIIT Bhubaneswar · B.Tech, Information Technology

2017 - 2021
